Age-Adjusted average rate	8.0 ¦	7.4	7.7	8.3	7.5	7.9	7.4	6.3	6.8	1 0.89 L
of hospitalizations per 1,000 †							(7.0-7.8)	(5.9-6.6)	(6.5-7.1)	1

- CI Confidence Interval; LL = Lower Limit; UL = Upper Limit
- H/L/NS Chances are at least 19 in 20 that the rate is higher (H) or lower (L) than the City of Toronto rate (p < 0.05). Rates marked not significantly (NS) different do not reach this level of significance.
  - a Denominator: Total Population Based on 2011 Census population estimates, Statistics Canada.
  - ± Numerator: All unscheduled Hospital admissions for Surgical conditions for 2 year (2011-2012) observation period.

    Data source: Canadian Institute for Health Information (CIHI)
  - Rate Represents the average annual rate of hospitalizations for 2 year (2011-2012) observation period
    - \* Rates based on fewer than 20 events are likely to be unstable and imprecise.
- Dash ( ) Number and rate are suppressed since numerator is less or equal to 5 or due to missing/incomplete data.
  For any cell (numerator OR denominator) less than 6, additional cells will be suppressed to disallow the calculation of the missing (suppressed) cell. Reported totals include suppressed cells.
  - \*\* Rate ratios for both sexes were created by dividing the local area rate by the City of Toronto aggregate rate.
  - † Rates are age-adjusted using the direct method and the 1991 Canada population as the standard population.
