# of inpatient days (2 yrs) <sup>a</sup>	987,902	1,125,802	2,113,704	441,053	485,215	926,268	4,393	5,622	¦ 10,015	1
# of ALC days for 2 years ±	131,377	155,580	286,957	60,874	68,920	l 129,794	471	633	¦ 1,104	1
Age-Adjusted rate of hospital	12.0	12.0	l 12.0	12.8	12.7	l 12.7	9.2	10.0	9.5	¦ 0.79 L
days that are ALC †		{	1		{		(8.3-10.0)	(9.2-10.8)	¦ (9.0-10.1)	1

CI Confidence Interval; LL = Lower Limit; UL = Upper Limit

H/L/NS Chances are at least 19 in 20 that the rate is higher (H) or lower (L) than the City of Toronto rate (p < 0.05). Rates marked not significantly (NS) different do not reach this level of significance.

**Population** Population - Based on 2011 Census population estimates, Statistics Canada.

- Denominator: Total number of inpatient days for 2 year (2011-2012) observation period. Data source: Canadian Institute for Health Information (CIHI)
   Numerator: Total number of Alternate Level of Care (ALC) Days for 2 year (2011-2012) of Care (ALC) Days for 2 year (2011-2012).
  - Numerator: Total number of Alternate Level of Care (ALC) Days for 2 year (2011-2012) observation period.
    Data source: Canadian Institute for Health Information (CIHI)

Rate Represents the percent of hospital days that are Alternate Level of Care (ALC) for 2 year (2011-2012) observation period

\* Rates based on fewer than 20 events are likely to be unstable and imprecise.

Dash (-) Number and rate are suppressed since numerator is less or equal to 5 or due to missing/incomplete data.
 For any cell (numerator OR denominator) less than 6, additional cells will be suppressed to disallow the calculation of the missing (suppressed) cell. Reported totals include suppressed cells.

\*\* Rate ratios for both sexes were created by dividing the local area rate by the City of Toronto aggregate rate.

**†** Rates are age-adjusted using the direct method and the 1991 Canada population as the standard population.
