Age-Adjusted rate of hospital	12.0	l 12.0	12.0	12.8	12.7	l 12.7	9.7	1	11.9	10.5	1 0.88 L
days that are ALC †		1	1		1	<b>!</b>	(9.2-10.3)	1 (1	1.1-12.6)	(10.1-11.0)	1

- CI Confidence Interval; LL = Lower Limit; UL = Upper Limit
- H/L/NS Chances are at least 19 in 20 that the rate is higher (H) or lower (L) than the City of Toronto rate (p < 0.05). Rates marked not significantly (NS) different do not reach this level of significance.
- Population Population Based on 2011 Census population estimates, Statistics Canada.
  - a Denominator: Total number of inpatient days for 2 year (2011-2012) observation period.
    - Data source: Canadian Institute for Health Information (CIHI)
  - Numerator: Total number of Alternate Level of Care (ALC) Days for 2 year (2011-2012) observation period.
     Data source: Canadian Institute for Health Information (CIHI)
  - Rate Represents the percent of hospital days that are Alternate Level of Care (ALC) for 2 year (2011-2012) observation period
    - \* Rates based on fewer than 20 events are likely to be unstable and imprecise.
  - Dash ( ) Number and rate are suppressed since numerator is less or equal to 5 or due to missing/incomplete data.
    For any cell (numerator OR denominator) less than 6, additional cells will be suppressed to disallow the calculation of the missing (suppressed) cell. Reported totals include suppressed cells.
    - \*\* Rate ratios for both sexes were created by dividing the local area rate by the City of Toronto aggregate rate.
    - † Rates are age-adjusted using the direct method and the 1991 Canada population as the standard population.
