N66 - Danforth Profile: Hospital Admissions

	City of Toronto			Toronto Central LHIN								
							Danforth					
Indicators	Males ¦	Females	Both	Males	Females	: Both	Males	;	Females	1	Both sexes	Rate
	1		sexes		1	sexes	(95% CI)	;	(95% CI)	1	(95% CI)	l Ratio**
Surgical Hospital	-		1		-	-		-		-		-
Admissions	1		!		!	1		+		1		1
(2011-2012) ±	1		¦		!	1		1		1		1
Total Population All Ages 0+ a	1,251,785	1,356,420	2,608,205	553,455	590,050	1,143,505	4,595	1	4,810	-	9,405	1
# of Hospitalizations (2 yrs) ±	25,448 ¦	24,743	¦ 50,191	10,597	9,828	20,425	104	1	87	- }	191	-
Age-Adjusted average rate	8.7 ¦	8.1	l 8.4	8.3	ł 7.5	† 7.9	9.2	-	7.8	-	8.5	1.01 NS
of hospitalizations per 1,000 †	-		1		1	1	(7.4-11.0)	-	(6.2-9.5)	-	(7.3-9.7)	}

- CI Confidence Interval; LL = Lower Limit; UL = Upper Limit
- H/L/NS Chances are at least 19 in 20 that the rate is higher (H) or lower (L) than the City of Toronto rate (p < 0.05). Rates marked not significantly (NS) different do not reach this level of significance.
 - a Denominator: Total Population Based on 2011 Census population estimates, Statistics Canada.
 - Numerator: All unscheduled Hospital admissions for Surgical conditions for 2 year (2011-2012) observation period.
 Data source: Canadian Institute for Health Information (CIHI)
 - Rate Represents the average annual rate of hospitalizations for 2 year (2011-2012) observation period
 - * Rates based on fewer than 20 events are likely to be unstable and imprecise.
- Dash (-) Number and rate are suppressed since numerator is less or equal to 5 or due to missing/incomplete data.
 For any cell (numerator OR denominator) less than 6, additional cells will be suppressed to disallow the calculation of the missing (suppressed) cell. Reported totals include suppressed cells.
 - ** Rate ratios for both sexes were created by dividing the local area rate by the City of Toronto aggregate rate.
 - † Rates are age-adjusted using the direct method and the 1991 Canada population as the standard population.
