Notes:

- Total for both sexes is slightly different from the sum for males and females and total for all the areas is also slightly different from the sum of all by Statistics Canada. In the section on Persons in Private Households where random rounding resulted in percents higher than 100%, the percents were reported as 100%.
- LTC data is as of March 2004 and includes planned for 2005 and projected for 2006.

**C I** - Confidence Interval

**H/L/NS** - chances are 19 in 20 that the rate is higher (H) or lower(L) or not significantly (NS) different than the aggregate (city) rate.

<sup>1</sup> The census includes questions to identify persons with limitations in the amount and kind of activities at home, at work, at school or in other activities due to a physical or mental condition or health problem lasting six months or more. The responses are used to identify persons for a post census survey on disability. The wording of the census screening questions differed between 1996 and 2001 with the 2001 census capturing a larger sample.

The rates for the two time periods are not comparable with each other. The 2001 census questions is similar to the CCHS question on activity limitation.
