

Please assign a note-taker and presenter. We will ask your presenter to report back on your findings at the end of the workshop.

Scenario 1:

You are developing a business case advocating for additional mental health provider supports within primary care in your sub-region. Identify the various datasets available on OCHPP that could provide support in creating this business case. Consider the need to find information on why the supports are required and where they would be most valuable.

Question 1: What are the core datasets available on the OCHPP website that would be important in building this business case?

Question 2: What data elements included in the tables identified do you think would be most useful?

Question 3: Are there any important cross-sections between datasets that you think would be important to include in your analysis?

Question 4: Is there any data that you wanted to help develop your business case that was not available?
