Age-Adjusted Rate †	14.8	16.0	15.4	14.6	15.5	15.1	13.9 (13.8-13.9)	16.4 (16.4-16.4)	15.1 (15.1-15.1)	0.98 L

CI Confidence Interval.

H / L / NS Chances are at least 19 in 20 that the rate is higher (H) or lower (L) than the City of Toronto rate ($p < 0.05$). Rates marked not significantly (NS) different do not reach this level of significance.

* Disability/activity limitation status is derived from the 2006 census, and refers to difficulties with daily activities and the reduction in the amount or kind of activities due to physical or mental conditions or health problems that have lasted or are expected to last six months or more. For young children, only those conditions or problems that have been diagnosed by a professional are included.

** Rate ratios for both sexes were created by dividing the local area rate by the City of Toronto aggregate rate.

^a Denominator: Total Population - Disability/Activity Limitation, 20% sample, 2006 Census, Community Social Data Strategy, Canadian Council on Social Development, Statistics Canada. Males plus females does not equal the total due to rounding at the census tract level.

± Numerator: Population with disabilities/activity limitations, 20% sample, 2006 Census. Males plus females does not equal the total due to rounding at the census tract level.

† Rates are age-adjusted using the direct method and the 1991 Canada population as the standard population.
