# of inpatient days (2 yrs) a	987,902	1,125,802	12,113,704	441,053	485,215	926,268	5,374	1	7,978	13,352	}	
# of ALC days for 2 years ±	131,377	155,580	286,957	60,874	68,920	129,794	540	1	898	1,438	}	
Age-Adjusted rate of hospital	12.0	12.0	12.0	12.8	12.7	l 12.7	9.2	1	10.0	9.6	0.80	
days that are ALC †		<b>!</b>			1		(8.4-10.0)	1	(9.3-10.6)	(9.1-10.1)	1	

- CI Confidence Interval; LL = Lower Limit; UL = Upper Limit
- H/L/NS Chances are at least 19 in 20 that the rate is higher (H) or lower (L) than the City of Toronto rate (p < 0.05). Rates marked not significantly (NS) different do not reach this level of significance.
- Population Population Based on 2011 Census population estimates, Statistics Canada.
  - a Denominator: Total number of inpatient days for 2 year (2011-2012) observation period.
    - Data source: Canadian Institute for Health Information (CIHI)
  - ± Numerator: Total number of Alternate Level of Care (ALC) Days for 2 year (2011-2012) observation period. Data source: Canadian Institute for Health Information (CIHI)
  - Rate Represents the percent of hospital days that are Alternate Level of Care (ALC) for 2 year (2011-2012) observation period
    - \* Rates based on fewer than 20 events are likely to be unstable and imprecise.
  - Dash ( ) Number and rate are suppressed since numerator is less or equal to 5 or due to missing/incomplete data.
    For any cell (numerator OR denominator) less than 6, additional cells will be suppressed to disallow the calculation of the missing (suppressed) cell. Reported totals include suppressed cells.
    - \*\* Rate ratios for both sexes were created by dividing the local area rate by the City of Toronto aggregate rate.
    - † Rates are age-adjusted using the direct method and the 1991 Canada population as the standard population.
