

N95 – Annex Profile: Hospital Admissions

Indicators	City of Toronto	Toronto Central LHIN	Annex	
	: Females : : :	: Females : : :	: Females : : (95% CI) : : :	: Rate : Ratio**
Prenatal Hospital Admissions (2011-2012) ±	: : : : : :	: : : : : :	: : : : : :	: : : : : :
Total Population Ages 15-49 ^a	: 687,795 : : : : :	: 315,930 : : : : :	: 8,665 : : : : :	: : : : : :
# of Hospitalizations (2 yrs) ±	: 33,330 : : : : :	: 12,241 : : : : :	: 276 : : : : :	: : : : : :
Age-Adjusted average rate of hospitalizations per 1,000 †	: 18.7 : : : : :	: 17.1 : : : : :	: 13.7 : : (12.1-15.4) : : :	: 0.73 L : : : :

CI Confidence Interval; LL = Lower Limit; UL = Upper Limit

H / L / NS Chances are at least 19 in 20 that the rate is higher (H) or lower (L) than the City of Toronto rate ($p < 0.05$). Rates marked not significantly (NS) different do not reach this level of significance.

^a Denominator: Total Population - Based on 2011 Census population estimates, Statistics Canada.

± Numerator: All unscheduled Hospital admissions for Prenatal conditions for 2 year (2011-2012) observation period.
Data source: Canadian Institute for Health Information (CIHI)

Rate Represents the average annual rate of hospitalizations for 2 year (2011-2012) observation period

* Rates based on fewer than 20 events are likely to be unstable and imprecise.

Dash (–) Number and rate are suppressed since numerator is less or equal to 5 or due to missing/incomplete data.

For any cell (numerator OR denominator) less than 6, additional cells will be suppressed to disallow the calculation of the missing (suppressed) cell. Reported totals include suppressed cells.

** Rate ratios were created by dividing the local area rate by the City of Toronto aggregate rate.

† Rates are age-adjusted using the direct method and the 1991 Canada population as the standard population.
